

## Breheny Site Engineer

We are looking for HND/Degree qualified setting out engineers with at least 5 years' experience in general Civil Engineering dealing with our core business of Roads and sewers and increasingly steel and concrete framed buildings. They need to have a good working knowledge of AutoCAD, be well versed in coordinate setting out and be able to carry out topographical surveys and generate as-built drawings. It would be an advantage if they were conversant with robotic instruments - at Breheny's we use Trimble robotic total stations with "Terra Model " software. (Training on these instruments will be given).

The candidate must hold a CSCS card and have a current driving license.
